Projects

2022
Role : Developer
Exam Portal Application

This Project create with Django Rest Framework. In this Project we use these technologies like Python, Django, JavaScript, BootStrap, CSS, HTML . Project has many features like Create Paper, Delete Paper, Auto Answer Checker in Backend after Paper submit. I explore use of javaScript in better way. I experience in this project how session & ORM works .

2022
Role : Developer
Email Send Website

This Project is Email Send Website, I use gmail smtp server for sending a mail. Website work like send mail multiple times in one click. Send one mail to many user in click. I use Simple Html Css & Backend with Django.
Github - https://github.com/weaponlions/automails.git

2022
Role : Developer
TextNote Website

I create a TextNote Website using a React & its Context api function & In Backend use Django Rest Framework for api calls, I create this Website for my personal use I store my code on my Website for anywhere i need to access the code without my pc.
Url - https://react-text-saver.herokuapp.com/
Git React - https://github.com/weaponlions/React-Todo-App.git
Get Django - https://github.com/weaponlions/Django-Todo-Backend.git

2022
Role : Developer
News Website

I create a News Website using a React & its Context api function & Javacript fetch api method for api calls & for api use third party website.
